ABSTRACT

This document presents the Ohio Integrated Technical and Academic Competency profile for marketing technology. The profile is to serve as the basis for curriculum development in Ohio's secondary, adult, and postsecondary programs. The profile includes a comprehensive listing of 580 specialty and foundation key indicators for evaluating mastery of 78 competencies in the following 13 areas: economics; communication and interpersonal skills; business law and ethics; professional development; business, management, and entrepreneurship; functions of marketing distribution; finance; marketing information management; pricing; product/service management; promotion; selling; and business-related technology skills. The competency lists are the result of all-encompassing research and review of existing competency profile lists and include input from industry, labor, professional organizations, professional representation, and national standards. The occupational skill competencies presented reflect the job opportunities and skills required to work in the marketing technology profession/career pathway. Critical academic, employability, and information technology skills have been integrated throughout the list to support the technical skills presented. The competencies are organized so that they can be clustered or grouped in a modular approach and used as the basis for curriculum development in Ohio's secondary, adult, and postsecondary programs. A brief overview of the marketing technology field is included. (MN)

Introduction to the Specialization ITAC

Revised 2001

The Ohio Integrated Technical and Academic Competency (ITAC) profiles are developed under the auspices of the Ohio Department of Education and the Ohio State Board of Education. They provide a broad-based educational response to Ohio's need for a skilled workforce. Each Specialization ITAC represents a profile of the professional or occupational competencies deemed essential for a graduate to perform proficiently when he or she graduates from the specialization workforce development programs in Business and Marketing, Industrial and Engineering Systems, Health Occupations, or Family and Consumer Sciences. The Specialization ITAC profile, in conjunction with the competencies identified in the Foundation and Clusters ITACs, provide a career pathway that can lead to employment or further education.

Process and Intent

The integrated competency lists are the result of all encompassing research and review of existing competency profile lists and includes input from industry, labor, professional organizations, professional and industrial representation, and national standards for a specific industry/profession. Representatives from a broad cross-section of Ohio professional organizations, businesses/professions, industry, and labor played a critical role in identifying current and future knowledge and skills for the industry, and defining the vision and scope of the profession/industry. The instructional methods and teaching strategies are the responsibility of the local school system and/or instructor.

Curriculum Applications Using the ITAC Competency Profiles

Each profile includes a comprehensive listing of occupational skill competencies that reflect the job opportunities and skills that are required to work in a specific profession/career pathway. Critical academic, employability and information technology skills have been integrated throughout the list to support the technical skills. These competency profiles will be used as the basis for curriculum development in Ohio's secondary, adult, and post-secondary programs. The specialization competency profiles are organized so that they can be clustered or grouped in a modular approach. Individual curriculum specialists can use the competencies profiles to develop instructional programs based on local needs as determined in conjunction with their local advisory committees. i.e., the specialization cluster academy approach. Final assessments will be designed to accompany each profile list and to accommodate student evaluation by modules.

Overview

Marketing Technology

When you go online to shop, you read product information written by a marketing specialist. Every time a new product is introduced by a business, marketing researchers have helped make the decision to develop it. Even the prices you pay for products and services are based on marketing decisions. Many people mistakenly believe that marketing is mostly about selling. But selling is only one function of marketing, and it is not the most important one necessarily. Marketing involves the identification of consumer needs, development of appropriate products, determination of best pricing, selection of the best storage, shipping, and other distribution processes, and the implementation of a variety of promotion strategies.

Careers in marketing are quite extensive and varied and include opportunities for people with varying educational and work experience. Job titles vary in the industry, but they include product manager, e-marketing director, packaging specialist, marketing researcher, business forecaster, media planner, and many others.

The *Ohio Occupational Employment Projections* Report, 1998-2008, indicates that marketing and sales positions will grow by 12.9% from 1998 to 2008. This growth rate ranks second across major occupational groups. The *Occupational Outlook Handbook* indicates that employment of advertising, marketing, promotions, public relations, and sales managers is expected to increase faster than the average for all occupations through 2010.

Marketing skills are needed in every business across all industries. Individuals interested in pursuing marketing careers will find exciting, diverse opportunities for success.
